

Production of bespoke light solutions for architects

One of our strengths is the customer orientation and the ability to respond to special requests. That is how the following custom design solution was created for a tax office building.

▪
Atypical set of luminaires made according to the architect's design, as a distinctive design element for lighting up the staircase. This set consists of a modification of the standard luminaires S802 and a centrally located luminaire Z810 which is translucent along its entire length.

What is unique about this solution is the special ceiling fastening using a hidden template to determine the exact position of each luminaire.

This system is very variable and it allows to create configuration according to customer's wishes.

▪
Thank you very much for cooperation [talaša kutěj architekti](http://talaša.kutěj.architekti).

Project realization
